MINTERRORNEWSTM MAGAZINE

Bringing the latest mint error news to the collector.

Mike Byers, Publisher & Editor Welcomes You!

Welcome to Mint Error News Magazine, bringing the latest mint error news and information to the collector. This is our fourth year bringing you both a print magazine and an on-line PDF magazine. There are now over 300 articles, features, discoveries, news stories, and mint error related info from the United States and around the World. Minterrornews.com has become the most popular and informative Internet resources for mint errors and is read by thousands of dealers and collectors.

Two major Mint Error News sponsors are Mike Byers and ANACS. Mike Byers is the Publisher and Editor of Mint Error News Magazine.

Mike Byers (mikebyers.com) has been a Professional Numismatist since 1978. He specializes in U.S. and World errors, and is now the largest dealer of the world's rarest mint errors. His new discoveries of major mint errors has been front page news for years. Mike Byers is also a Consultant for ANACS for Mint Errors.

Mike Byers is a life member of ANA since 1985, a charter member of NGC and a featured dealer/member of PCGS. He is also a founder member of the California Coin & Precious Metals Association and a life member of the Central States Numismatic Society.

ANACS is one of the three major grading services. They have been authenticating, certifying and encapsulating mint errors since 1991 which is years longer than the other two grading services combined. ANACS is highly respected in the Numismatic Community and has extensive experience in authenticating mint errors.

Two other sponsors to minterrornews.com are Tim Bullard (errorcointrader.com) and Allan Levy (alsocoins.com). Because of their combined experience and insight of the error coin market, they will bring valuable news and information to minterrornews.com.

Additional sponsors are CoinLink, CoinFacts.com, errorworldclub.org, Eureka Trading, uspatterns.com, Northeast Numismatics and Robert L. Astrich. We encourage collectors and dealers to submit articles and photos of major mint errors that we may feature on the website.

Off-Center Errors

by Al Levy (alscoins.com)

Here are records of recent sales of off-center mint errors on eBay:

1. All coins were listed on eBay and closed from January 1, 2006 to March 31, 2006.
2. All lots had buyers. If the coins actually changed hands is unknown.
3. A picture accompanied each lot or it was not recognized.
4. Mislabeled items were ignored.
5. Some lots may have changed hands more than once.

6. "D" next to the date symbolizes that the coin had damage or was scratched.
7. "C" next to the date symbolizes that the coin was cleaned.
8. "B" next to the date symbolizes that the coin had damage and was cleaned.
9. If the date or mint mark was missing or partially visible, parentheses were used.
10. Postage/handling/insurance fees were ignored.
11. Major auctions were not listed.

Off-Metal & Clad Layer Split-Off Errors

by Al Levy (alscoins.com)

1. ALL LOTS HAD BUYERS. IF THE COINS ACTUALLY CHANGED HANDS IS UNKNOWN.
2. A PICTURE ACCOMPANIED EACH LOT OR IT WAS NOT RECOGNIZED.
3. BLURRY PICTURES OR OTHER PROBLEMS ARE NOTATED UNDER "OBSERVATION".
4. ITEMS MISLABELLED COMMANDED A SMALL PREMIUM.
5. SOME LOTS CHANGED HANDS MORE THAN ONCE.
6. ANY SCRATCHES, DENTS OR DEFECTS NOTATED WERE EITHER IN THE DESCRIPTION OR GRADING SERVICES' HOLDERS.
7. AUCTION HOUSES THAT LISTED THESE ERRORS WERE IGNORED.
8. SHIPPING CHARGES ARE NOT INCLUDED.

FROM 01/01/06 TO 03/31/06			
DOUBLE DENOMINATIONS			
DESCRIPTION	GRADED	SOLD	OBSERVATION

NORTHEAST NUMISMATICS INC. RARE COINS · PERSONAL SERVICE

Northeast Numismatics has an impressive inventory of over 1,200 U.S. and foreign coins. We have a strong selection of mint errors, both U.S. and foreign. And we carry every area of United States coinage from colonials through rare gold including type, commemoratives, silver dollars and much, in addition to our extensive inventory of world coins.

High quality "fresh" coins are what we are known for and take pleasure in offering. We constantly are hearing from our customers about our excellent prices and high customer service. 2003 is our 39th year of business, so order with complete confidence. Also, please keep in mind that we are always buying coins of all kinds, certified and uncertified, to fill our want lists.

Buffalo Nickel "Speared Bison" & Wisconsin Quarter "Extra Leaves"

PLEASE NOTE: THE ERROR TYPES LISTED BELOW WERE EBAY LOTS THAT CLOSED WITH A HIGH BIDDER. IF THE RESERVE PRICE WAS NOT MET, OR PICTURE WAS NOT ATTACHED, THEN I IGNORED THE AUCTION. FUZZY PICTURES, OR QUESTIONABLE DESCRIPTIONS ARE NOT INCLUDED.

AN IMPORTANT OBSERVATION ABOUT THE BUFFALO 5c "SPEARED BISON" & THE "WISCONSIN" 25c EXTRA LEAFS ARE EBAY ITEMS ONLY. DEALERS ARE SHOWING INTEREST IN BUYING THESE ITEMS FOR INVENTORY. A NEW UPI NEWS RELEASE CREATED A NEW INTEREST IN THE "WISCONSIN

LEAF" ERRORS FUELING AN INCREASE. MS 67 PCGS/NGC ARE SHOWING VERY STRONG PRICES.

THE HIGH LEAF IS SUPPOSE TO BE SCARCER THAN THE LOW LEAF. CHECK OUT THE SALES TOTALS AS BOTH VARIETIES ARE ABOUT THE SAME IN QUANTITIES. BOTH, VERY MUCH IN DEMAND.

END OF ROLL COINS. COLLECTORS NEED TO KNOW THAT THERE IS A MACHINE ON THE MARKET THAT WILL ALLOW ANYONE TO ROLL YOUR OWN COINS. IT IS A CRIMPING MACHINE TO BE USED WITH PRE-CRIMPED (SHOTGUN SHELL) STYLE WRAPPERS.

FROM 01/01/06 TO 03/31/06

Unique 1920 Standing Liberty Quarter Struck on Peru 20C Planchet Certified by NGC

by Mike Byers (mikebyers.com)

This is the only known Standing Liberty Quarter struck on a foreign planchet for the entire series. Standing Liberty Quarter Off-Metals are so rare that there are only a handful known struck on any other planchet. This unique off-metal is a very recent discovery and was unknown to the numismatic community and not listed in any reference book or catalog.

It was struck on a Peru 20 Centavos planchet with a weight of 6.9 grams, a diameter of 24mm and a composition of 75% copper and 25% nickel.

In the reference Domestic and Foreign Coins Manufactured by Mints of the United States, 1793-1976 published by the U.S. Treasury, we find that in 1920, the Philadelphia mint struck 20 centavos pieces for Peru that were made of 75% copper, 25% nickel with a diameter of 24mm and a gross weight of 7 grams. This Standing Liberty Quarter off-metal has a copper-nickel look instead of silver, is full size and is considerably thicker than a silver quarter blank.

This is one of the most incredible and rare major mint errors that I've ever had the pleasure of offering for sale. It is an extreme rarity and would be the centerpiece of any mint error or Standing Liberty Quarter collection.

NGC Certifies Double Struck Carson City Morgan Dollar

NGC recently certified a Double Struck 1882-CC Morgan Dollar, still encapsulated within its GSA holder. The first strike was approximately 5% off-center and shifted towards 6 o'clock. The second strike was properly centered on the planchet. A doubling of detail is visible throughout the coin, and an off-center date appears just beneath the regular date, overstruck by denticles during the second strike. A double struck error occurs when a coin does not exit the dies after striking and receives a second strike from the dies.

Since NGC began to certify them in January of 2003, NGC has graded over 30,000 Morgan Dollars in their original GSA holders. Although a few error coins have been encountered, all were relatively minor being either struck-through or lamination errors. This is the most significant error coin that NGC has seen in a GSA holder. Mint Error expert David J. Camire further comments that "only about a dozen double struck Morgan Dollars are known, and most are double struck in collar and most are dated 1921. This is a great find."

The coin's submitter, Chris Miner, proprietor of Holland Coin & Jewelry in Holland Michigan, acquired the coin in a larger purchase of GSA dollars, where it initially went unnoticed. He has long been interested in Carson City dollars, having grown up in a Michigan-town coincidentally named, Carson City. When he discovered the error he sent it to NGC for certification, where it graded MS62. He chose NGC for encapsulation because it was important that the coin remain in its GSA holder as a marker of its pedigree and history. While still considering various options, Miner plans to sell his prized find at auction later this year.

Carson City dollars in GSA holders have become very popular with collectors as emblems of the West. The General Services Administration (GSA) was responsible for sorting and marketing the US Treasury's hoard of silver dollars after the Treasury ceased issuing dollar coins in 1964. In a series of sales lasting from 1973 to 1980, this hoard of several million silver dollars, mostly Morgan Dollars minted at Carson City, was dispersed via auction and fixed prices. Sealed in rigid plastic holders and boxed with a message from then President Richard M. Nixon, these silver dollars account for most of the mint state 'CC' Morgans known today.

NGC certifies coins in these government holders, by strapping them with a tamper-evident band. Grade and other attribution details are printed on its surface, and holograms are placed on the cases top and bottom edges. GSA dollars can be submitted to NGC under regular tiers and VarietyPlus VAM attribution is also available. All GSA dollars must be submitted on invoices separate from other submissions, and should not be submitted with their accompanying cardboard boxes. Contact NGC Customer Service with your questions at 1-800-NGC-COIN or by email at service@ngccoin.com.

Martha Washington Half Dollar Test Piece

There is one set of a Dime, Quarter and Half struck by Martha Washington dies that are permanently housed in the Smithsonian Institute, embedded in blocks of lucite. According to United States Pattern and Related Issues, by Andrew W. Pollock III, “the only trial pieces purported to have survived metallurgical testing in 1965 were the Dime, Quarter Dollar, and Half Dollar equivalent strikes in copper-nickel clad over copper.”

My discovery of the Martha Washington Test Piece on a copper-zinc Cent planchet struck 10% off-center with a uniface reverse was a front page Coin World article on August 7th, 2000. In a response to the Martha Washington Test Piece that I discovered, the Mint announced that “the dies are available to the Mint’s metal and blank vendors for testing.”

This is a Martha Washington Half Dollar. It is listed the 9th Edition of the Judd book as #2132. This piece was also certified by NGC as a half dollar-sized test piece graded MS 63.

Double Struck 4 Pence Lord Baltimore Piece Sold For \$40,250 In Heritage Auction

Editor's Note: Here is the listing from the Heritage Galleries Auction:

(1659) 4PENCE Lord Baltimore Fourpence MS62 NGC. Breen-74. Large Bust and Shield. There are two different varieties of the Maryland Groat currently known, with either a large bust or a small bust as cataloged by Breen. The actual size of the bust is not that much different on either variety, but is different in relation to the lettering. This large bust variety, which is the more common, has the bottom curve of the bust nearly touching the lettering below. Most examples of this variety currently known are in low grades. Just two examples of the other variety with the bust distant from the lettering are currently known, according to Breen in his Complete Encyclopedia. We are currently aware of only three other comparable examples, from the Eliasberg, Garrett, and Roper collections. The comprehensive collection of John J. Ford, Jr., currently be auctioned by Stack's, did not include an example of this denomination. Not only is this remarkable example important because of its condition, but also because it is fully double struck, with evidence clearly visible on both sides. The first strike was several degrees off center, and rotated with respect to the

second strike. We cannot be certain whether this is the finest known Maryland Groat or not, but it is certainly well in the Condition Census. It is also important as the Wayte Raymond Plate Coin, per the NGC holder. The surfaces are smooth and satiny with rich grayish-silver color accented by peripheral iridescent toning. Cecil Calvert had his coins made in London sometime in 1659, and transported them to Maryland at the time they were produced. Different sources have placed the actual time of minting between 1658 and 1660. Older records suggest that his subsequent arrest was due to the appearance of his portrait on the coins, but it is now understood that his arrest was actually due to the production and exportation of his own coinage from Europe to colonial America.(#32)

Interesting World Errors

by Martin Wettmark

1845 British 1/2 Crown Brockage

South African Krugerrand Partial Collar

2005 Gold Turkey 25 Kourush with a strong indent from planchet

Double Struck Draped Bust Dollar

This is one of the most spectacular early type major mint errors that I've ever handled. A handful of double struck Draped Bust Dollars that are known are either rotated in the collar with only a minimal amount of detail showing from the original strike, or are so worn it is hard to see much of anything.

This Draped Bust Dollar was double struck and the second strike is 15% off-center. It is a dramatic and very visual mint error since much detail from the original strike still shows. For this type of coin and mint error, it is in a very high grade and is an exciting discovery.

1861 Clark, Gruber & Co. Twenty Dollar (K-8) Struck Over an 1853 U.S. Assay Office Twenty Dollar (K-19)

Editor's Note: The following description is from the Heritage Galleries 2002 September Long Beach Signature Sale Auction Listing.

1861 \$20 Clark, Gruber & Co. Twenty Dollar (K-8) Struck Over an 1853 U.S. Assay Office Twenty Dollar (K-19) MS62 PCGS. New Kagin designation K-13d (see page 361 of pattern section). Brilliant prooflike surfaces with the center devices sharp and weakness around the edges.

This unique piece was unknown to us until a couple of years ago. We now know of five overstruck Clark Gruber & Co. Twenties. In the upcoming second edition of *Private Gold Coins and Patterns of the United States*, we plan to list all of these pieces in the pattern section and list them as Set-Up Pieces. This specimen will have the designation 13d. The other known pieces are:

- 13. Struck over an 1852 U.S. \$20;
- 13a. Struck over an 1857-S U.S. \$20;
- 13b. Struck over an 1849 U.S. \$10;
- 13c. Struck over an 1850 U.S. \$20.

Originally we believed that these specimens were overstruck in Philadelphia by the firm who designed the dies--the jewelers Bailey & Company. After further research and discussions with other numismatists, including John Dannreuther of the Professional Coin Grading Service, we now believe that these were struck in Colorado by Clark, Gruber & Co. to check the force of the striking and the spacing of the dies. This would account for the variance of the pressure and sharpness of the impressions. These Set-Up pieces are not unlike other similar types such as those seen for Morgan Dollars, Kennedy Half Dollars, and others. Before striking the regular gold blanks, which would have been considered quite precious even then, these test or trial striking allowed the dies to first be properly aligned and avoid errors. They are recognizable because their central area is well to fully struck, while the periphery is weak or missing.

Evidently the coiners would take whatever gold coins they had on hand to test the new dies. On this specimen, the striking by the 1861 Clark dies on the obverse (tablet side) of the 1853 Assay Office \$20 was not properly aligned causing parts of the host coin to appear as if were over the 1861 impression. While the central part of the Clark, Gruber Double Eagle is well struck (thus causing the flattened host Assay twenty), its periphery is not. This results in an odd looking phenomenon for the date and stars; the date has only a weak top half and the stars are only partially impressed. Similarly, the host Assay twenty details are rounded and not flattened there, as the Clark, Gruber dies did not fully impress those areas.

This also leads to the illusion that the Assay twenty is struck over the Clark, Gruber piece as the Assay detail is on "top" of the date and star detail of the Clark, Gruber since these areas were not flattened in the minting process. (These areas of the host Assay twenty would be just as flat as its central area and fields, if the date and stars area of the die had been fully struck with properly spaced dies.) There also are two obvious sets of denticles apparent from both impressions. This is a most unusual, interesting, and historic Gold Rush coin that represents true pioneer ingenuity in creating a medium of exchange in the underdeveloped West. Unique.

From The Estate of Jack L. Klausen. MS62 PCGS

1965 Kennedy Half Dollar Struck on an Ultra-Thin, Low-Density Planchet

by Mike Diamond

I bought this unusual-looking half dollar in an eBay auction toward the end of 2003. At a reported weight of 7.5 grams, it was 4 grams lighter than a normal half dollar of this era should be. NGC had labeled it as having been struck on “10c thickness stock”. This ambiguous label could mean it was struck on copper-nickel clad dime stock or, perhaps, 40% silver half dollar stock rolled to dime thickness. The listed weight of 7.5 grams was not consistent with either interpretation. A half dollar struck on a planchet punched out of copper-nickel clad dime stock should weigh around 6.67 grams. A half dollar struck on a planchet punched out of 40% silver half dollar stock rolled to dime thickness should weigh approximately 7.3 grams. So it was too heavy for both.

A weight of 7.5 grams is consistent with a half dollar struck on a 21% silver core. Each clad layer weighs approximately 2 grams, so a loss of both would yield the reported weight. One such half dollar is actually known. However, an exposed core displays a gray, streaky appearance. This coin showed a uniformly bright, silvery appearance. So I didn’t think that was likely.

The weight could be might also be consistent with a “split core” error of just the right thickness. The unstruck perimeter of the reverse does show fine striations that are not present on the obverse.

However, the striations appear too fine to represent a fracture plane, and, anyway, the reverse does not show the gray, streaky color of an exposed core.

Interestingly, a weight of 7.5 grams is consistent with a half dollar punched out of 90% silver dime stock. A transitional wrong stock error would be quite a find, so I decided to buy the coin and crack it out. The first thing I did after liberating the coin was to weigh it on my analytical balance. It came in at 7.46 grams. So far, so good.

Edge-on, the coin is almost as thin as a dime. Apart from a few short, dark streaks, it betrayed no sign of a 79% copper core, which in normal half dollars usually shows up as a continuous dark gray band. The edge shows weak reeding all around, which

demonstrates that the coin's diameter matches that of a normal half dollar. The strike is weak, especially at the perimeter, which is what you'd expect of a coin this thin.

Although I knew that not all 40% silver half dollar show obvious evidence of a core, I was still optimistic I was dealing with a solid 90% silver alloy. That was my expectation when I subjected the coin to density test known as a specific gravity (SG) test. That test confounded my expectations as it came out to a very low 9.1. A 90% silver coin should have a specific gravity of 10.34 (Margolis and Weinberg, 2000). I ran the test twice to make sure that my results were accurate.

A specific gravity result of 9.1 is very low. The listed SG of a normal 40% silver half dollar is 9.53. The listed SG of a copper-nickel clad half dollar is 8.92. So my half dollar was closer to copper-nickel than the normal silver-and-copper composition.

I now needed to verify that the observed mean SG in a sample of 40% silver halves matched the listed mean SG of 9.53 reported in The Error Coin Encyclopedia. I also wanted to compare it to the theoretical mean density of a disc composed of 40% silver and 60% copper. The specific gravity of elemental silver is 10.5 while that of elemental copper is 8.96 (Handbook of Chemistry and Physics). A weighted average of the two densities yields a theoretical value of 9.58 for a 40% silver half. In addition to calculating a mean, I also wanted to establish a range of variation. To that end I performed specific gravity tests on a sample of ten 40% silver halves from the years 1965 to 1969. The mean SG value was 9.45. The observed range was 9.37 to 9.54. The standard deviation was 0.063.

The anomalous 1965 half dollar was over 5 standard deviation units from the mean. Anything over 2 standard deviation units is considered statistically significant. If this half dollar was composed of silver and copper, it would have to be in a ratio of 10% silver to 90% copper!

At this point all I knew was that the half dollar was abnormally thin and light, with an abnormally low density. I couldn't tell if it was a solid alloy, a clad composition, or something more exotic, like a silver-plated composition. So I sent it off to metallurgist and numismatist Chris Pilliod for a high-energy, semi-quantitative x-ray analysis (SEM/X-ray). The results of that analysis were equally puzzling.

Three analyses were performed on both the obverse and reverse face, with each test at a different voltage. Higher voltage results in increased depth of penetration. I only received a printout of the report on the obverse face but was assured that the reverse face produced identical readings.

At the lowest voltage – 15 keV – the obverse showed a composition of 91% silver and 9% copper. At a voltage of 20 keV, it showed a composition of 71% silver and 29% copper. At a voltage of 30 keV, it showed a composition of 57% silver and 43% copper. These three tests revealed that the coin was not a solid alloy but, instead, consisted of silver or a silver/copper alloy overlying a core of copper or copper/silver alloy. The shallowest penetration would be the most accurate indicator of surface metal composition. According

to Chris, at 15 keV, only the top few layers of atoms are sampled. 91% silver is considerably higher than the 80% silver that a standard 40% silver half dollar is supposed to have. There are four possible interpretations of this anomalous value.

1. Experimental error. Since results obtained for the obverse and reverse matched, this doesn't seem to be likely.
2. Depletion of copper from the surface. This would seem unlikely in a coin that, when first taken from its slab, was bright and untarnished.
3. An accurate reading of a clad layer abnormally rich in silver.
4. A thin clad layer of pure silver or thin layer of pure silver plating, with the 9% copper signal leaking through from the core

The testing lab "wired" the edge to get a fresh exposure and to limit scattering of the x-ray beam from the scanning electron microscope. When I inspected the cut, the underlying metal gleamed with a bright copper color. I figured an ordinary 40% silver half would show the gray color that the edge of an unmarked coin usually shows. This ultimately proved to be an unreliable diagnostic, because when I cut into the edge of a normal half dollar with a scalpel, the underlying metal also had a bright copper color. The gray color must be due to copper depletion at the surface or the effects of the chemical rinse bath that planchets are immersed in prior to the strike.

Only one test of the edge was undertaken and it showed a ratio of 95% copper to 5% silver. The core of a normal 40% silver half dollar should have a composition of 79% copper and 21% silver.

Chris warned me that readings taken from the edge are notoriously unreliable. Be that as it may, we can assign three possible interpretations to this result:

1. Experimental error. Without additional tests, there's no way to know how reproducible these results are.
2. An accurate reading of a 95% copper core.
3. The core is actually pure copper, with the residual 5% silver coming from the metal surrounding the cut in the edge.

After all this testing and analysis, what conclusions can I draw?

Chris Pilliod believes it's simply a half dollar struck on rolled-thin 40% silver clad stock. However, in my view, the specific gravity test, SEM/X-ray results, and the striated reverse perimeter are not consistent with this interpretation. Again, the specific gravity results would indicate an aggregate composition of 10% silver and 90% copper.

It could possibly be a half dollar struck on rolled-thin 40% silver clad stock with abnormal proportions of silver and copper in both clad layers and the core. However, given the high percentage of copper that would have to be present in the core, I would have expected the core to show up on the edge as a continuous coppery or dark band. The core is not evident on the edge. Apart from a few thin, short, irregular, dark streaks, the edge has the same bright silvery appearance as the two faces. The roughened, striated reverse perimeter is also not consistent with a simple rolled-thin error.

It could be a planchet composed of pure silver plating over a pure copper core. This would be consistent with the low specific gravity, the SEM/X-ray results, the striated reverse perimeter (not fully obscured by the thin plating), and the failure of the core to show up on the edge.

If it is a silver-plated, pure copper planchet, perhaps it was not intended to be struck as a half dollar at all. Silver-over-copper is a composition I've seen in tokens and in counterfeit coins. Perhaps a half dollar-sized planchet intended for a token or medal ended up in a half dollar hopper.

Finally, it could be an experimental coin. During the run-up to the transition from silver to clad coins, numerous experimental compositions were tested (Bowers, 2003). But why would anyone make an experimental half dollar planchet that was so darned thin?

I suppose this coin is destined to remain a conundrum (or should I say "coinundrum").

1829 Large Cent

First Strike Brockage Reverse

This early dated Large Cent has a first strike mirror brockage reverse showing the obverse design. Most Large Cent brockages are very circulated and show the incuse wreath on the obverse. This is a well known Large Cent brockage and its pedigree includes Terranova, Hilgard, Arconti and Downey. It is spectacular to see the portrait on both sides.

Banana Note Sells For \$25,300

From the Heritage Galleries Auction Listing:

Fr. 2084-H \$20 1996 Federal Reserve Note. PCGS Choice New 63PPQ. This colorful error is commonly referred by collectors in the numismatic fraternity as “The Del Monte Note,” simply because of the banana sticker that is a retained printed obstruction. Most obstructions fall off shortly after printing leaving a blank area of paper missing the design, but errors with objects that “stick” to the note are very rare. Objects seen on other obstruction errors include a Band-Aid, paper fragments, scotch tape, and wood shavings. United States Currency is essentially printed in three stages: the first printing is the back of the note, the second printing provides the face devices, and the third, final printing includes the Treasury Seal and the serial numbers. When this note was printed at the Fort Worth facility of the Bureau of Engraving and Printing, it went through first and second printings before the sticker found its way onto the surface. The sticker’s placement is ideal, as it covers part of the second printing details and is overlaid by part of the Treasury Seal and serial number from the third printing. Most would conjecture that this note was no accident and probably the result of some very bored or creative BEP employee. Its presence in the market place however is not dubious as it passed through the regular channels of the Federal Reserve before it was released in circulation. In the summer of 2004 a college student in Ohio received it as part of an ATM withdrawal and shortly there after posted it on eBay where it sold to the highest of 12 bids. The note was a bargain at around \$10,000 on eBay as news of the note had barely hit the collecting community. In subsequent weeks it was the cover story in Bank Note Reporter and Numismatic News. This fabled error is now looking for its third home, but we suspect it will take serious consideration and a very strong bid to be the successful bidder.

1982 Canadian Dime Muled with Cent Die

To date, this is the only reported specimen of a Canadian Dime that was muled with the reverse die of a 1982 Cent. It was purchased from a Canadian collector who discovered it in change. Major Canadian mint errors such as two-headed or two-tailed, and certain mules of different denominations are highly collected by US collectors and are very valuable.

NGC Certifies Set of Two-Headed and Two-Tailed Great Britain Half Pence

by Mike Byers (mikebyers.com)

There are approximately thirty genuine two-headed or two-tailed coins that have been authenticated by ANACS, PCGS or NGC. There are only four known “Two Tailed” U.S. coins: three Quarters and one Dime. One of the Quarters recently sold for \$80,000.

I have handled most of the world coins that were struck with either two obverse or two reverse dies. Two of these are Canadian Copper Cents that were struck with two reverse dies and authenticated by PCGS. I purchased these in a Canadian Mint Error Collection and they have since been featured in a front page Coin World article.

Great Britain changed to the decimal coinage in 1971, which was the first year that they struck the new ½ Pence KM-914. Recently, three unique and exotic mint errors were discovered in an estate of a Mint Superintendent. All three of these coins were struck from the dies used for this new decimal ½ Pence in 1971. These were certified by NGC and are now being offered for sale. One was struck from two reverse dies, another struck from two obverse dies and the third is an unbelievable coin struck by two obverse dies in a different metal. Hopefully these three unique and historic mint errors will remain intact since they belong together.

Braided Hair Large Cent Struck 35% Off-Center

by Mike Byers (mikebyers.com)

Although off-center Large Cents are available, they are generally 5% to 20% off-center and in an extremely low grade of preservation. This Braided Hair type Large Cent (1840-1857) was struck at least 35% off-center and is in gem mint state condition. It is one of the finest known off-center Large Cents. I purchased it in 1975 from the Bolt Collection of mint errors. I was fortunately enough to purchase it again after 30 years and it is still one of my favorite Large Cent errors.

Canadian 1978 Cent Struck on a U.S. 1973 Cent

A coin struck on dies from two different countries is extremely rare, especially when it's on the same denomination, involves a U.S. struck coin, and has 2 different dates.

This recent discovery is a major mint error involving Mints from the U.S. and Canada. It's a 1973 U.S. Cent that was overstruck by 1978 Canadian Cent Dies! Lincoln's portrait and the date 1973 is clearly visible on the obverse, and the Lincoln Memorial is very visible on the reverse.

There are a few known U.S. coins struck on Canadian blank planchets, and a few known Canadian coins struck on U.S. blank planchets, but this is the only known Canadian coin of any denomination that was struck on a previously struck U.S. coin.

It's also a dual-date which adds to its excitement and rarity.

Unique 1838 \$5 Die Trial Splasher J-A1838-6

PCGS recently authenticated and certified this spectacular \$5 die trial. It was stuck in white metal in 1838. It is the reverse design for the regular No Motto with Small Letters, which was struck in 1839 and 1840. Technically it is a splasher since it was struck only on one side on oversized white metal. It is a dramatic die trial of an early design for the \$5 gold piece and is in gem mint state condition. It is the plate coin in the 9th Edition of Judd. Unique.

CONECA

The Combined Organizations of Numismatic Error Collectors of America

CONECA is a national numismatic organization devoted to the education of error and variety coin collectors. CONECA focuses on many error and variety specialties, including doubled dies, Repunched mintmarks, multiple errors, clips, double strikes, off-metals and off-centers -- just to name a few. It publishes an educational magazine, The Errorscope, which is printed and mailed to members bimonthly. CONECA offers a lending library, examination, listing and attribution services; it holds annual meetings at major conventions (referred to as Errorama) around the country, and offers auction services to its members. Please visit conecaonline.org and enjoy!

CONECA Variety Attribution Services

CONECA offers two attribution services. One service enables members and non-members to send their coins directly to an authorized CONECA attributer. The other service is offered through the numismatic grading firm of ICG and enables CONECA members and non-members to have their coins attributed by a CONECA attributer and then graded and slabbed by ICG.

CONECA Error Examination Services

CONECA offers two examination services. One service enables members and non-members to send coins to an authorized CONECA examiner who will return an opinion of each coin's error classification. The other service is offered through the numismatic grading firm of ICG and enables CONECA members and non-members to have their coins examined by a CONECA examiner and then graded and slabbed by ICG.

Consign Your Coins to Mike Byers

Terms and Conditions

We are offering this service for error collectors and dealers alike. The reason why we are doing this is to promote the error business through the world wide web and to connect error collectors with the coins they have been searching for. In order to post your item on our web site: byersnc.com, you must agree to the following terms and conditions.

1. All major U.S. mint errors are accepted if they are certified by ANACS, PCGS, NGC or ICG.
2. The approximate value of each item must exceed \$3,000.
3. Byers Numismatic Corp charges a 10 % commission for each sale.
4. The minimum time for any listing is thirty days.
5. Seller agrees to a seven day return privilege from date of receipt.
6. Seller agrees to use an escrow service if requested by the buyer.
7. We reserve the right to deny or cancel any listing at any time.
8. All listing are subject to prior sale.

Please do not offer us the following:

1. More than two coins bonded together.
2. Caps more than ½ inch high.
3. U.S. Errors that were obviously and intentionally struck as error coins. No impossible mint errors.

We only accept consignments of U.S. Errors that were legitimately found or released thru normal distribution channels.

Scanning Specifications

1. Scan both the obverse and reverse of the entire holder.
2. Scan with a resolution of at least 300 dpi.
3. Save the picture in jpeg format (jpg).

Information Requirements

In addition to e-mailing a photo of your item, please include the following information:

1. Name, Address & Phone Number
2. E-Mail Address
3. Asking Price

After your item is listed, we will contact you by e-mail with any offers and questions. Once a price is agreed upon we will handle the entire sale for a 10% transaction fee, which includes all costs (eBay fees, grading fees, webmaster charges, postage and registration fees, insurance, paperwork, etc.).

If you have a Mint Error collection for sale or would like to sell your duplicates and do not want to consign your coin(s), we can purchase your entire collection outright. Please contact us at mike@mikebyers.com.

Mint Error News Price Guide

This price guide is brought to you by Mint Error News. It has been compiled by many of the top major mint error dealers.

This price guide is a guide. Prices fluctuate due to the date, grade, eye appeal and how dramatic the striking error is. Rarity is also a factor. The price is sometimes based on the rarity and grade of the type of coin as well as how rare the error is. The price can also vary depending on whether two collectors are bidding for the same rare major mint error. When purchasing a mint error, it is important to use multiple resources to determine value, as there are many mint errors that do not fit into one category.

Proof Errors

Proof coins are struck by technicians who hand feed the blanks into special presses. They are produced, examined, and packaged using extreme quality control. It is very unusual to find major proof errors. A few broadstrikes, off-centers, double strikes in collars and off-metals have been known to be found in sealed proof sets. Proof errors are aggressively sought after by many error collectors.

A very small group of Proof errors recently came from a collection that was auctioned by the State of California. The U.S. Secret Service inspected and released this collection to the State of California determining that it was legal to own. The State of California then auctioned the collection and it has been dispersed since the sale.

Denomination	Broadstrikes	Die Trials	Double/Triple Strikes	Off-Center Strikes	Partial Collar Errors
Proof Lincoln Cent	\$1,500 - \$2,500	N/A	\$4,000	\$1,500 - \$3,000	\$750

Mint Error News Price Guide

Broadstrikes

A broadstruck error occurs when a coin is struck without the collar to form the rim and edge that is part of the shape of the coin. Coins can be broadstruck on either type one or type two planchets. When a coin is broadstruck the blank being fed into the collar will spread and distort outward as it is being struck because the collar isn't in the correct position to retain it.

Mint Error News Price Guide

Partial Collars

Partial collar strikes occur when there is a malfunction of the striking press. This causes the collar to be in an incorrect position. The lower die (usually the reverse die) is recessed in the collar. This allows the coin which is going to be struck to have a formed rim. After a coin is struck the lower die raises upwards, pushing the struck coin out of the collar and ejecting it. If a blank entering the collar is not properly seated, it will only have partial reeding as it is struck. The edge of this coin will have a partial reeding and a partial blank surface area. Recently, the Mint has installed new machinery where either die can be installed in either position.

Uniface Strikes

Uniface coins occur when there have been two blank planchets in the press at the same time. The other blank will obstruct the die on either the obverse or reverse side, which will prevent it from having that design on the coin. There are many different variations involving uniface errors. In addition to having a 100% blank obverse or reverse, a coin can be struck off-center, with a blank planchet in the collar which will obstruct one side of the off-center. There are also mated pairs which have a combination of multiple errors which can include a side which is uniface. Finally, there are uniface strikes due to a die cap which adhered to the die, forming itself in the shape of a die and striking blank planchets.

Bonded Coins

Bonded coins occur when the feeder system, which supplies blank planchets to the coin press, malfunctions and jams. When this occurs, a struck coin is not properly ejected and another planchet is fed into the collar and is struck. This struck coin will land on top of the previously unejected strike. These coins will then crush and bond together. This may occur many times as more coins bond.

Coins Struck on Feeder Finger Tips

After a recent tour of the U.S. Mint at Philadelphia, it was discovered that the minting process had changed to some degree. One of the changes was that “feeder fingers” were used during the striking of all denominations of U.S. coins. Prior to this tour, U.S. coins that were struck on feeder finger tips were authenticated and described as being struck on aluminum scrap. Coins from all modern denominations have been discovered that were struck on the tips of these feeder fingers.

Struck Fragments

The blanking press takes the coils of metal strips and punches blanks out of it, ejecting the webbing at the other end. The webbing is cut into small scrap pieces to be melted and recycled. Occasionally a scrap piece will be mixed with the blank planchets and struck by the dies. Struck fragments are rare in the larger denominations. These can be uniface or die struck both sides and are very rare on type coins.

Denomination	Uniface	Die Struck Both Sides

Mated Pairs

Mated pairs involve two individual coins with different errors that were struck together at the same time. Mated pair error combinations can be found in most error types and come in many shapes and sizes. Mated pairs can be overlapped when one of the coins is struck off-center on top of another coin. Another type involves a brockage where a struck coin was perfectly centered on a blank and restruck. Some mated pairs involve a die cap where the cap and brockage coin are discovered together, but this is a scarce find.

The rarest mated pair type involves two die caps (obverse and reverse) where both dies were capped at the same time and both die caps are mated. This last type is extremely rare and there are only a few known examples of mated pairs involving an

obverse die cap and reverse die cap. There are several of these mated pairs known on Kennedy Halves including two dated 1976, which is the Bicentennial year. One of the most spectacular mated pairs involve two Barber Dimes, an obverse die cap mated to a reverse die cap and are unique.

Mated pairs can also involve an off-metal where a smaller blank planchet or smaller struck coin was struck on top of a larger coin. This type is extremely rare. The most spectacular pair known is a double struck Franklin Half which was mated to a Lincoln Cent. The Lincoln Cent blank was on top of the obverse of the struck Franklin Half. This pair was then struck together. It is unique.

Transitional Errors

A transitional error occurs when a coin is struck on a planchet from a previous year with different metal composition. The most famous transitional is a 1943 copper cent struck on a 1942 copper blank. 1943 cents were struck in steel because of the copper shortage during World War II. Other famous transitionals include 1965 coinage struck in silver instead of clad.

There are also transitionals struck on blanks for the next year. An example is 1964 coinage in clad instead of silver. Most recently, transitionals were discovered involving the SBA and Sacagawea Dollars of 1999 and 2000. There are eight known 1999 SBA Dollars struck on the brass planchet for the 2000 Sacagawea Dollar, and four known 2000 Sacagawea Dollars struck on a clad planchet for the 1999 SBA Dollar.

U.S. Gold Errors

Major mint errors on U.S. Gold coins are the most prized category of all mint errors. Gold errors are very rare and a few have traded in the \$75,000 to \$100,000 range. Even a broadstruck U.S. Gold coin can easily sell for \$15,000 to \$30,000 compared to a broadstruck Cent, Nickel, Dime or Quarter which all sell for well under \$10. Many serious collectors of Gold Errors have to wait patiently for months and sometimes even years to acquire that one special piece for their collection.

The prices listed here are for common dates in AU-Unc. Better dates and errors that are in gem condition are worth considerably more.

Denomination	Partial Collar	Broadstruck	Clipped Planchet	3% - 5% Off-Center	10% - 15% Off-Center

Mint Error News Price Guide

Indents

An indent error occurs when two blanks are fed inadvertently into the same collar, with one blank partly overlaying on top of the other. When the hammer die strikes this combination, the upper blank will be forced into the lower blank, creating a depression which is shaped similar to the upper blank. A scarce type of indent occurs when a blank intended for one denomination lands on top of a blank from a different denomination.

Capped Dies

A capped die is caused when a struck coin sticks to the upper hammer die. Once the coin is struck to the die face, the reverse of the struck coin becomes the new die face. When the next blank is fed into the collar and the strike occurs, the reverse design of the adhered struck coin impresses itself into the new blank. This struck coin is a brockage strike. The coin that adhered to the upper die is known as a die cap. This process repeats itself as more coins are struck by the cap. The greater the number of strikes, the higher the cap metal will be pushed around the upper die shaft. Eventually, the cap brakes away from the die in the shape of a thimble.

Die Adjustment Strikes

Die adjustment strikes are also known as die trials. This error occurs when a coin is struck from the press with very little pressure. When the press is being set up and adjusted, extremely weak strikes occur as the strike pressure reaches its optimum level. These die trials are destroyed after being struck and are rarely found in circulation.

Double Denominations

One of the most expensive, popular, and desired types of errors are the double denominations. This error happens when a coin is struck on a previously struck coin of a smaller denomination. Examples are a cent on a struck dime, and a nickel on a struck cent. The most dramatic are those with considerable design visible from the original strike. There are a few known double denominations with different dates.

Brockages

A brockage error can only occur when there are two coins involved. One of the coins involved will always be a struck coin which has not ejected properly. That struck coin will find its way back between the dies and will be struck next to a blank planchet which was fed into the collar. The image of that first struck coin will be impressed into that side of the blank planchet. The result will be a second coin which has images of the first coin impressed into it. Those images will be pressed into the coin and the image will be in reverse. This incuse sunken image is known as a brockage.

Double & Multiple Strikes

When a blank planchet is struck by the dies, the normal procedure is for the feeders to eject the struck coin out of the collar and into a chute. If there is a malfunction and the struck coin isn't ejected, it may receive a second or third strike by the dies. A multiple struck coin can happen in many ways and have many combinations of errors.

Off-Center Strikes

Off-center coins are one of the most common and best known types of errors. This happens when a blank which is supposed to be fed into the press, lands in the collar improperly. When this occurs only part of the blank is between the upper and lower dies. When the dies strike the blank, only that part will be struck with a design.

Off-Metals

Off-metal and wrong planchet errors occur when a correctly made blank from one denomination is accidentally fed into a press for another denomination. Examples are a nickel struck on a cent planchet and a cent struck on a dime planchet. The coin struck on an incorrect blank will weigh exactly what the denomination of that blank would have been. An even more dramatic wrong planchet error is a coin struck on a previously struck coin of a different metal.

1822 Error Quarter Brings \$195,500 in Heritage Palm Beach Auction

From Heritage Galleries Auction Listing:

1822 25C 25/50C MS66 NGC. Ex: Eliasberg. B-2, High R.5. Apparently the Finest Known of this extremely popular variety coming in a notch above two Gem MS65 coins reported, one by PCGS, the other by NGC. The toning is a delight to behold for any experienced collector with lilac-gray throughout mixed with splashes of blue and yellow-gold near the devices. Many of the silver coins from the Eliasberg Collection had toning that matched this present coin as they were stored in the same type of holders and environment for decades. The devices are frosty while the fields show prooflike reflectivity except for a small satiny area before Liberty's neck surrounding a small nick. It is all but certain that this coin was struck soon after the handful of proofs were made from this pair of dies, as the present coin is an early die state and shows so many of the characteristics of a proof. Walter Breen considered this particular coin to be a proof, others a business strike. As to the strike, the central devices and legends are sharp save for the uppermost portions of the talons on the eagle, and the obverse stars generally lack their radial lines except for star 10 which is sharp, matching the characteristics of the proofs from this die pairing.

This is one of the most famous engraving errors in American numismatics. The die engraver used the denomination punches for half dollar, and first engraved 50 C. instead of 25 C. Realizing the mistake, he corrected this by engraving the correct 25 over the 50, but he first placed the 5 punch way too low on the die, with the loop of the 5 into the dentils. The 5 punch was moved into proper position, and the denomination was finally corrected. Breen suspects that ailing Robert Scot was the engraver of this blundered die, and this conjecture would fit the evidence. A question comes to mind as to why this reverse die was employed to coin proofs for the year--especially when proofs are known of the perfect die 1822 quarter. Were these blundered die proofs struck first, or later when additional proofs were needed? Both share the same obverse die, perhaps the new perfect reverse die was not prepared until after the initial proofs were struck using the blundered die. The answer lies in careful study of the few proofs from each die pairing, to figure out which came first based on the condition of the obverse die. What is known, is that the 25/50 blundered reverse die has proven to be one of the most coveted of the Capped Bust quarters. Remarkably, the Philadelphia Mint shelved this die after the small issue of proofs and general circulation strikes in 1822, only to resurrect this same reverse and strike more quarters with it in 1828.

ANACS Certifies Sacagawea Dollar Struck on a Nickel Planchet

Editor's note:

Since the U.S. Mint changed to the new Schuller Presses, very few mint errors are escaping the Mint and are being discovered in bags or in circulation. It is amazing that this 2005 dated Sacagawea Dollar was discovered struck on a nickel blank. It is also the only known Sacagawea Dollar that is struck on a Cent, Nickel or Dime blank for any of the years that the Sacagawea Dollar was struck. It was authenticated and certified mint state 64 in the new ANACS holder.

Unique Errors Featured in Upcoming Heritage Auction at Central States

From the Heritage Galleries Listing:

1910 1C Lincoln Cent Obverse Uniface Test Strike. AU58 PCGS. Struck on slightly larger than normal planchet with a very deep and bold strike. Traces of mint red in the protected areas and no disfiguring spots are present. This coin was probably made to test the die and striking pressure needed to bring up the device detail fully. An unusual item which is seldom offered and undoubtedly rare.

From the Heritage Galleries Listing:

1999-D 10C Roosevelt Dime--Broadstruck on a Cent Planchet--MS64 Brown PCGS. A dramatic error that accentuates the fact that the planchet was incorrect by the broadstruck features. The devices are generally sharp although some of the peripheral lettering displays the distortions caused by the expansion of the planchet during the strike. Traces of zinc alloy are seen in a few places on the obverse and reverse.

From the Heritage Galleries Listing:

1999 1C Lincoln Cent Obverse Die Muled With a Roosevelt Dime Reverse on a Lincoln Cent Planchet MS66 Red PCGS. This incredible error somehow escaped the scrutiny of Mint employees. We are uncertain how a Lincoln cent obverse die was paired with a Roosevelt dime reverse, but this coin proves that it happened. No others are known to exist: it is believed that the present muling of a cent obverse with a dime reverse is unique. Cross-denomination errors are all but unheard-of from the U.S. mints. The only other examples that come to mind are the Sacagawea dollar/Washington quarter mules, of which about a dozen are known. Incredibly, this type of error occurred only recently, during the entire history of U.S. coinage that spans more than 200 years.

The obverse is sharply struck on the figure of Lincoln and the date, although the opposing dime die, being slightly smaller than the cent planchet, caused minor peripheral weakness on the obverse. In other words, nothing was behind the periphery of the cent die to force the expanding metal into the recesses. Naturally, the slightly smaller reverse dime die caused that side to be boldly struck. Shortly after this phenomenon dropped from the (mismatched) dies, it was discovered in a jewelry store in Michigan before entering circulation. It has since been carefully handled, and has developed no spots or other distractions. The coin remains a solid Premium Gem MS66, with full mint Red.

For the error specialist, this would be the centerpiece of an advanced collection. All error collectors will long remember the present coin and hope that someday it will again be publicly offered. This piece was widely publicized in *Coin World* and *Numismatic News* soon after its discovery. Since then, it has passed to two or three owners. This prize represents a unique opportunity. It is undoubtedly one of the most important highlights of this or any numismatic auction.

From the Heritage Galleries Auction Listing:

1964-D 10C Roosevelt Dime--Struck on a United States One Cent Alloy Planchet. MS64 PCGS. An important error struck during the final year that the silver dime planchets were used for circulation. Demand for coinage was tremendous in 1964, and the mints struggled to keep up with the endless stream of orders as the roll boom was in full swing. This coin was probably created when a strip of copper (for cent planchets) was mistakenly run through the planchet cutting machine when it was set for dime planchets. Thus copper dime sized planchets were made and this particular one made it through the coining process and escaped into numismatic hands. It would seem logical that this type of error would be far scarcer than a dime struck on a cent planchet. A thin die crack extends from the rim through IN toward Roosevelt's chin.

NUMISMATIC NEWS & RESOURCES

The CoinLink Numismatic Directory launched our 10th anniversary edition of CoinLink on January 1, 2005.

If you have a web site and want to get listed - Add your Site Here!

New site features include an Articles Database, interactive Polls, a "What's New" section highlighting everything new in the marketplace, and an expanded news section.

We are committed to providing the latest information with unequalled access to numismatic resources to make your coin collecting more enjoyable. Thanks for being a part of CoinLink.

uspatterns.com

The Society of U.S. Pattern Collectors is dedicated to the study of many of the rarest coins struck at the U.S. Mint: patterns, die trials and experimental pieces.

Saul Teichman's Want List

Saul.Teichman@ey.com

I am looking for the following off-metal errors:

Wartime Nickel on a Copper Cent planchet.
Bicentennial Half on a Cent planchet.
Bicentennial Half on a Dime planchet.
Kennedy Half on a Sacagawea Dollar planchet - if it exists.
Ike Dollar on a Cent planchet.

Ike Dollar on a Nickel 5 Cent planchet.
Ike Dollar on a Dime planchet.
Ike Dollar on a Quarter planchet.
Sacagawea Dollar on a Cent planchet.
Sacagawea Dollar on a Nickel planchet.
Sacagawea Dollar on a Dime planchet - if it exists.

A Study of World Mis-Struck Coins

by Bill Snyder - worlderrors.com

Editor's Note: This is the third in a series of charts to be published in Mint Error News Magazine which were compiled by Bill Snyder of worlderrors.com. He undertook a study to painstakingly research and compile a list of known errors from major world countries. The chart below covers German striking errors from 1790 to 1990.

Bill states that "this study will determine which types of mis-strikes were common or rare, by country and time period. The study was limited to major striking errors such as double strikes, off-centers, brockages, etc."

Country	Type of Error	Date	Amount	Denom	Specifics
Germany	Brockage-R	1790-P	½	Stuber	"die break at 90 in date."
Germany	Off Center	1815 AS	3	Pfennig	"C-10."
Germany	Off Center	1821	1	Heller	
Germany	Off Center	1843B	3	Pfennig	"Rostock Germany."
Germany	Off Center	1843-BS	3	Pfennig	Rostock, C-10a
Germany	Brockage-O	1861-	½	Gr	Prussia
Germany	Off Center	1873-1889	10	Pfennig	Early type. Stretch shows only bottom of "10" & "Pfennig"
Germany	Off Center	1873-77AA	2	Pfennig	"about 65% o/c".
Germany	Off Center	1874	10	Pfennig	Silver.
Germany	Off Center	1874	10	Pfennig	"Well worn rare"
Germany	Off Center	1874A	10	Pfennig	30% o/c K-11.
Germany	Off Center	1875A	1	Pfennig	"15-20% off center, w/resultant cup-shaped wide flaring rim. (2)"
Germany	Off Center	1875A	1	Pfennig	"15-20% off center, w/resultant cup-shaped wide flaring rim. (2)"
Germany	Off Center	1875A	2	Pfennig	Tough early date/type.
Germany	Double Strike	1875-A	1	Pfennig	2nd strike is 90% o/c K-9.
Germany	Off Center	1875-C	2	Pfennig	"20-25% o/c, some red". K-6.
Germany	Off Center	1875-C	2	Pfennig	"25% o/c K-12. Brown Unc. Scarce"
Germany	Off Center	1875-D	10	Pfennig	10% o/c K-4
Germany	Off Center	1876A	1	Pfennig	"15% o/c with edge slanted upward neat!!"
Germany	Wrong Planchet	1876G	10	Pfennig	"on a 5 pf planchet. ANACS 30. Dull gray toning, scuffy w/several ticks."
Germany	Wrong Planchet	1876-G	10	Pfennig	"On a 5 pfennig planchet."
Germany	Off Center	1877-A	2	Pfennig	Tough early date/type.
Germany	Off Center	1887A	1	Pfennig	KM-1
Germany	Off Center	1887A	1	Pfennig	
Germany	Off Center	1890-1916	1	Pfennig	
Germany	Off Center	1890-1916	10	Pfennig	Reusze sold 2 about 20% o/c at 1991 ANA show.
Germany	Brockage-R	1890-1916D	1	Pfennig	Red in fields.
Germany	Off Center	1890-1916D	5	Pfennig	Nice stretch. about 40% of coin shows.

Country	Type of Error	Date	Amount	Denom	Specifics
Germany	Off Center	1891-1916	1	Mark(s)	
Germany	Brockage-O	1892	1	Pfennig	red in incuse lettering.
Germany	Off Center	1894-A	5	Pfennig	
Germany	Wrong Planchet	1896J	10	Pfennig	"Silver. 3.92gm Rare".
Germany	Off Center	1899	5	Pfennig	50% o/c K-10
Germany	Off Center	1899-A	5	Pfennig	
Germany	Broad Strike	1899-E	10	Pfennig	Lot 2497 in Berliner Munz-Cabinet Auction #21.
Germany	Off Center	190(?)	2	Pfennig	"light damage".
Germany	Off Center	1900	10	Pfennig	
Germany	Off Center	1900-A	10	Pfennig	
Germany	Off Center	1902-A	5	Pfennig	
Germany	Double Strike	1902-J	5	Pfennig	"Reverse of 2nd strike (90% o/c) is indented by planchet."
Germany	Cap-R	1904	2	Pfennig	coin had stuck to the rev; "eagle" side blurry. Nice.
Germany	Off Center	1904-16-A	2	Pfennig	Lot #4470, Emporium Hamburg Auction #4.
Germany	Brockage-R	1904-1916	2	Pfennig	Nice!
Germany	Off Center	1904-1916A	2	Pfennig	
Germany	Cap	1904G	2	Pfennig	"super nice "cap" nice even 1/8" deep, rev w/ expanded eagle"
Germany	Off Center	1905-1919	½	Mark(s)	Silver. 40% o/c K-7.
Germany	Off Center	1905-1919	½	Mark(s)	Rim raised K-9 to K-3. Scoop/stretch shows 75% of coin.
Germany	Off Center	1905-1919	½	Mark(s)	
Germany	Off Center	1905-1919	½	Mark(s)	45% o/c.
Germany	Triple Strike	1905-1919	½	Mark(s)	"Triple struck on reverse. Rare."
Germany	Off Center	1906-A	10	Pfennig	Nice unc. 30% o/c K-11:30 (w/"10" as obv per KM).
Germany	Capped Die	1906-G	10	Pfennig	Centered - Obv is expanded; rev is normal. 5mm flan expansion
Germany	Broad Strike	1907A	1	Pfennig	"uncentered lokks 10% o/c K-12."
Germany	Off Center	1907G	10	Pfennig	
Germany	Off Center	1909 ca	½	Mark(s)	"Very rare older coin."
Germany	Off Center	190X	2	Pfennig	
Germany	Off Center	191-	10	Pfennig	"50% o/c; slightly cup-shaped".
Germany	Off Center	1910	3	Mark(s)	Crown. "Choice BU"
Germany	Off Center	1911A	10	Pfennig	copper nickel, KM-11.
Germany	Off Center	1911A	10	Pfennig	
Germany	Off Center	1911-G	25	Pfennig	ca 15% o/c.
Germany	Double Strike	1912-A	1	Pfennig	Much red. Nice small double strike, but obv only doubled.
Germany	Off Center	1915	5	Pfennig	(191)5. 30% o/c, Y-21, KM-19.
Germany	Off Center	1915	5	Pfennig	
Germany	Off Center	1915 A	5	Pfennig	
Germany	Off Center	1915 A	5	Pfennig	
Germany	Wrong Planchet	1915 ca	10	Pfennig	"10 pfen on a 5 pfen planchet."
Germany	Double Strike	1915 ca	5	Pfennig	2nd strike 80% o/c K-5 1/2 uniface.

Country	Type of Error	Date	Amount	Denom	Specifics
Germany	Double Strike	1915 ca	5	Pfennig	"uniface rust spot rev."
Germany	Brockage-R	1915-1922	5	Pfennig	
Germany	Double Strike	1915-1922	5	Pfennig	2nd strike 95% o/c K6.apped. 2nd is 80% indented rev brockag
Germany	Double Strike	1915-1922	5	Pfennig	2nd strike is 80% o/c K-6, obv only.
Germany	Off Center	1915-1922	5	Pfennig	KM19.
Germany	Off Center	1915-1922	5	Pfennig	
Germany	Off Center	1915-1922	5	Pfennig	KM19.
Germany	Off Center	1915-1922	5	Pfennig	90% o/c.
Germany	Mated Pair	1915A	5	Pfennig	"It scratches on partial brockage beauty of a pair."
Germany	Mated Pair	1915A	5	Pfennig	1st coin correctly struck. 2nd coin struck indented by 1st.
Germany	Off Center	1915A	5	Pfennig	
Germany	Off Center	1915A	5	Pfennig	
Germany	Off Center	1916	1	Kopek(s)	30% o/c K-11.
Germany	Off Center	1916	10	Pfennig	May be zinc (rare type), 45% o/c K-12:20.
Germany	Double Strike	1916	10	Pfennig	2nd strike is 90% o/c K-4:30 & forms thin, neat lower shelf.
Germany	Cap-O	1916	10	Pfennig	rev shows traces of both numeral and eagle.
Germany	Double Strike	1916	10	Pfennig	Weakly struck. 2nd strike is 55% o/c K-3 & rot. 160 deg CCW.
Germany	Off Center	1916	5	Pfennig	KM-19
Germany	Off Center	1916	5	Pfennig	
Germany	Off center	1916 (nd)	1	Kopek(s)	"These coins were used in occupation of Baltics, Pol, Russ."

Fred Weinberg & Co.

Dealer in Major Mint Error Coins & Currency

fredweinberg.com

BUYING MAJOR ERROR COINS & CURRENCY

If you have a single major mint error coin, either a recent issue or an older type coin, or 1,000 Off-Center Cents, please contact us. We stock over 60,000 Major Mint Error Coins and constantly need to purchase Major Error Coins for our clientele (please note that we do not deal in or buy Die Varieties, Damaged Coins, Doubled Dies, Filled Dies, or Die Cracks).

We do buy Major Mint Errors - such as Off-Center, Off-Metals, Double Strikes, Clad Layers missing, Die Caps, Double Denomination, etc.

Because of the many differences in each Error Coin we request that you send scans of your coin(s) to us for our examination and firm offer.

ERROR WORLD

Join the *hottest*
Error Coin Club on the Net!

e r r o r w o r l d c l u b . o r g

The Error World on-line coin club exists for the purpose of advancing the knowledge and the field of error coin collecting.

Error World is dedicated to the promotion, discussion and dissemination of facts and ideas about error coinage, both domestic and world-wide.

Error World exists as a vehicle to bring collectors of both foreign and domestic error coinage together in a professional and relaxed atmosphere where they can exchange information, display photos and engage in lively debate about error coinage.

Error World is a non-profit organization with all revenues being put back into the club to provide improved services to the members of the club.

Error World will, from time to time, accept contributions from designated Patrons in the form of contest prizes, and/or cash to be used to defray club expenses.

Error World will, from time to time, attempt to obtain sponsors from the numismatic field who will bring price saving offers to Error World members.

Error Coin Information Exchange

The Error Coin Information Exchange (ECIE) is a freewheeling forum dedicated to the study of error coins and varieties. Founded and hosted by veteran writer and researcher Mike Diamond, it is a great place to visit, whether you're an established collector or a novice. ECIE is not flashy and doesn't waste your time with a message board clogged with idle chit-chat. It simply provides the best information on error coins available on the web. Here you can read about late-breaking developments; find out about the newest discoveries; listen or participate in spirited debates about how error coins are produced; test your skills with periodic quizzes and brain-teasers. ECIE proudly maintains an atmosphere of skeptical inquiry. Here, no claim goes unchallenged and no theory goes untested. This is the best place to find out what kind of error you really have, how it was created, and the extent to which it is rare or unusual.

Policy Statement: By design, ECIE does not attempt to develop partnerships with dealers, grading services, or auction houses. It neither seeks, nor encourages, discounts, promotions, giveaways, or advertisements. To do otherwise would create a conflict of interest that could compromise the fierce independence and impartiality that distinguishes ECIE from all other on-line error coin clubs.

Jim's Coins Error Auctions

MAIL BID SALE #14 CLOSES MAY 31, 2006

- 1) SEND ALL BIDS TO: JIM'S COINS, 702 N. MIDVALE BLVD. B-2, MADISON, WI 53705, OR FAX #608-233-0175, OR PHONE 608-233-2118, OR EMAIL: jimscoins@sbcglobal.net
- 2) THE HIGHEST BIDDER ACKNOWLEDGED BY THE AUCTIONEER SHALL BE THE BUYER. THE AUCTIONEER RESERVES THE RIGHT TO REJECT ANY BID OR WITHDRAW ANY LOT FROM THE SALE. BIDDERS ARE RESPONSIBLE FOR THEIR OWN ERRORS, SO DOUBLE CHECK YOUR BIDS. THE FIRST POSTMARK WINS IN CASE OF A TIE BID.
- 3) ALL SALES ARE FOR CASH AND ARE PAYABLE IMMEDIATELY UPON RECEIPT OF THE INVOICE
- 4) AUCTIONS ARE OPEN TO ALL AND NO DEPOSIT IS REQUIRED OR DESIRED.
- 5) NO UNLIMITED BIDS ARE ACCEPTED. WINNING BIDDERS WILL BE AWARDED LOT AT THEIR BID OR AT A 10% ADVANCE OVER THE SECOND HIGHEST BID, WHICHEVER IS LOWER. IF NO OTHER BIDS ARE RECEIVED FOR A LOT, THE BIDDER WILL BE AWARDED THE LOT AT THE MINIMUM BID, OR ESTIMATE IF NO MINIMUM IS GIVEN.
- 6) ALL ITEMS ARE GUARANTEED GENUINE. BIDDERS MAY RETURN ANY ITEM NOT AS DESCRIBED.
- 7) A \$1 HANDLING CHARGE WILL BE ADDED TO ALL WINNING INVOICES. BID EARLY AND BID OFTEN. THANKS! -LEN & JIM

Frequently Asked Questions

What are struck fragments?

The blanking press takes the coils of metal strips and punches blanks out of it, ejecting the webbing at the other end. The webbing is cut into small scrap pieces to be melted and recycled. Occasionally a scrap piece will be mixed with the blank planchets and struck by the dies. Struck fragments are rare in the larger denominations. These can be uniface or die struck both sides and are very rare on type coins.

Frequently Asked Questions

What are uniface die trials?

Uniface Die Trials are deliberate, one sided impressions using either the obverse or reverse die. These Die Trials can be from finished or unfinished dies. Sometimes hubs are used, rather than the actual finished die. Metals other than the adopted composition are frequently used to strike Uniface Die Trials.
