Buffalo Nickel “Speared Bison” & Wisconsin Quarter “Extra Leaves”

by Al Levy (alscoins.com)

PLEASE NOTE: THE ERROR TYPES LISTED BELOW WERE EBAY LOTS THAT CLOSED WITH A HIGH BIDDER. IF THE RESERVE PRICE WAS NOT MET, OR PICTURE WAS NOT ATTACHED, THEN I IGNORED THE AUCTION. FUZZY PICTURES, OR QUESTIONABLE DESCRIPTIONS ARE NOT INCLUDED.

AN IMPORTANT OBSERVATION ABOUT THE BUFFALO 5c “SPEARED BISON” & THE “WISCONSIN” 25c EXTRA LEAFS SOLD ON EBAY. DEALERS ARE STOCKING AND SELLING THESE AT SHOWS. PRICES HAVE TAKEN A MAJOR DOWNTURN. DEMAND HAS DIMINISHED GREATLY FOR THE SPEARED BISON. I MAY MOVE THIS LISTING TO YEARLY AS THE FAD PASSED. THE MAJORITY OF LISTED COINS REMAINED UNSOLD. EXTRA LEAFS HAVE GONE DOWN IN PRICE AS MORE ENTERED THE MARKET.

THE HIGH LEAF IS SCARCER THAN THE LOW LEAF. CHECK OUT THE SALES TOTALS AS BOTH VARIETIES ARE ABOUT THE SAME IN QUANTITIES. STILL VERY ACTIVELY TRADED.

SPECIAL NOTE:

END OF ROLL COINS. COLLECTORS NEED TO KNOW THAT THERE ARE MACHINES ON THE MARKET THAT WILL ALLOW ANYONE TO ROLL YOUR OWN COINS. IT IS A CRIMPING MACHINE TO BE USED WITH PRE-CRIMPED (SHOTGUN SHELL) STYLE WRAPPERS. BUYER BEWARE!!!

QUITE A FEW OF THESE ARE PRESENTED ON A DAILY BASIS, BUT THE PRICE REALIZED KEEPS ME FROM LISTING THEM HERE. (THERE ARE COLLECTORS THAT WILL BUY COUNTERFEITS AND PAY BIG MONEY.)

PCGS Certifies Walking Lib 50¢ Double Struck 50% Off-Center On A Silver Quarter Planchet

by Mike Byers (mikebyers.com)

This unique and spectacular Walking Liberty Half Dollar major mint error is among the rarest and most valuable U.S. mint errors known.

All off-metals in the Walking Liberty Half Dollar series are extremely rare. These include two known on foreign planchets (valued at \$25K each), 5-7 known on Quarter planchets (valued at \$40K each), one known on a silver dime planchet (valued at \$100K) one known on a steel cent planchet (valued at \$125K) and a double strike with the second strike approximately 50% off-center (valued at \$40K).

Combining two major striking errors on the same coin that is in a series known for extremely rare and expensive mint errors is unbelievable.

This Walking Liberty Half was struck at the San Francisco Mint on a U.S. Silver Quarter planchet. It failed to eject, remaining in the collar and was struck again 50% off-center. Another blank was resting on the off-center portion on the obverse during the second off-center strike.

PCGS recently certified and authenticated this gem mint error MS 65. This mint error transcends the error hobby and belongs in a collection of the finest U.S. coins.

1983 China Mint Tour

by Fred Weinberg (fredweinberg.com)

I have had the opportunity to take numerous tours of the official government-run Shanghai Mint through the years. The following photos were taken during these tours.

The front of the Shanghai Mint building is a replica of the U.S. Philadelphia Mint. Around 1923, minting equipment from the Philadelphia Mint that was no longer needed was brought to the Shanghai Mint. To honor the Americans who were so helpful in modernizing the Chinese Shanghai Mint, the Chinese built the front of their Mint building to emulate the classic Philadelphia facade!

On the left, a worker at the Shanghai Mint in China holds a strip of solid gold from which Chinese Panda coin blanks was punched. On the right, a Master Hub is being made from the original galvano for the Chinese Panda silver one ounce bullion coins. The machine traces the galvano image to produce the main die hub from which all Silver Panda dies are made.

1983 China Mint Tour

Here I am, holding a tray of major mint error coins collected by the workers at the Chinese government Mint at Shanghai. The coins are all aluminum, and look to be of the 1 or 2 Fen (or perhaps 5 Fen) denomination, none of which have been produced for more than 15 years now because they have become so small. There are a variety of major minting errors represented here, including severely off-center strikes, and multi-struck coins. I did my best to try to get permission to take a few of them home with him, but like most official government minting authorities, the Shanghai Mint wasn't about to let these fantastic errors out the door easily!

Here is a worker at the Shanghai Mint in China checking out the U.S. errors in my 1983 error coin catalog. My 25-30 year old major mint error catalogs are featured in each issue of Mint Error News Magazine and on minterrornews.com.

NGC Certifies Proof Jefferson Presidential Dollar Struck on Elliptical Planchet

by Mike Byers (mikebyers.com)

The cover of Mint Error News Magazine Issue 23 featured the only known U.S. Proof coin on any denomination that was struck on an elliptical planchet. It was a 2007 Utah State Quarter and was authenticated and certified PR 66 by PCGS.

Unbelievably, a second known U.S. proof coin struck on an elliptical planchet has been discovered. It is a proof Jefferson Presidential Dollar weighing 7.4 grams and was authenticated and certified Proof 69 by NGC.

There are not even any SBA, Sacagawea or Presidential Dollars known that were struck for circulation and also struck on elliptical planchets, making this proof elliptical Presidential Dollar an exciting discovery.

A Quartet of Swedish Double-Strikes

by Martin Wettmark

I wanted to share this group of four 5 öre coins from the last 100 years of Swedish coinage with the readers of Mint Error News Magazine. All these errors are very rare. Especially the 5 öre from Gustav V, who reigned for more than 40 years. Major errors on the 5 öre in bronze were virtually unknown until I found this coin at an eBay auction this winter. The coin was sold to me by an American dealer. The smallest 5 öre, dated 1973, was also struck on a wrong planchet, making it the first of this kind of multiple error on any Swedish coin.

Unique Gold Solidus

by Martin Wettmark

This Solidus was found at a Swedish coin dealer in January this year. It is a gold Solidus from the period of Maurice Tiberius (AD 582-602) or Phocas (AD 602-610).

The coin has two reverse sides! It is not a brockage coin. The coin has no signs of manipulation. Since I know there is a lot of “faked” coins of this type it was sent to David R Sear the leading expert on ancient coins and author of several books in the subject for assessment. From his written certificate:

“This piece, which is of normal solidus weight, has been struck twice with the same reverse die. Both strikings would have required the piece to be placed on a flat surface, instead of the usual anvil (obverse) die, while the punch die was being applied to the blank side. From my own experience I have never seen such as striking which must have resulted from fraudulent activity on the part of a mint worker. The risk run be the perpetrator of such a crime would have been very great indeed (probably death) so presumably he managed to escape detection and used the piece for financial gain in his gaming activities”

Obviously the Mintworker thought it was worth taking the risk...

David R. Sear

State: Byzantine Empire

Ruler: Maurice Tiberius (AD 582-602) or Phocas (AD 602-610)

Denomination: gold solidus, struck with the same reverse die on both sides

Mint: Constantinople (1st officina)

Weight: 4.39 grams

Maximum Diameter: 21.42 grams

Dies Axis: →

Obverse: VICTORI—A AVGG A, angel standing facing, holding long P-headed cross in right hand and globus cruciger in left, CON OB in exergue.

Reverse: same as obverse and from the same die.

References: for coins of this reverse type, cf. DOC 5 (Maurice Tiberius) and DOC 5 (Phocas) = Sear (*Byzantine Coins and Their Values*) 478 and 618

Grade: VF and an intriguing curiosity, presumably struck illicitly by a mint worker, possibly for gaming purposes

Note: this piece, which is of normal solidus weight, has been struck twice from the same reverse die. Both strikings would have required the piece to be placed on a flat surface, instead of the usual anvil (obverse) die, while the punch die was being applied to the blank side. From my own experience I have never seen such a striking which must have resulted from fraudulent activity on the part of a mint worker. The risk run by the perpetrator of such a crime would have been very great indeed (probably death) so presumably he managed to escape detection and used the piece for financial gain in his gaming activities.

NGC Confirms Major Hub Variety of 2008-W Silver Eagles

By NGC (ngccoin.com)

NGC has confirmed that 2008-W Uncirculated Silver Eagles were struck with two different reverse types. Many are aware that Silver Eagles issued in 2008 show numerous subtle modifications to their design. NGC has now identified 2008-W Uncirculated Silver Eagles struck using reverse dies of the pre-modification style, or reverse type of 2007.

The two reverse styles are very easy to distinguish from one another. As NGC previously reported, the most obvious identification diagnostic is the U of UNITED on the coin's reverse. On the Reverse of 2008, the U has a spur on the right side of the letter. The Reverse of 2007, has simply a bowl-shaped U, without spur or downstroke. A number of other diagnostics are evident and are illustrated below.

NGC is designating 2008-W Silver Eagles with reverse style of 2007 as REVERSE OF 2007. Coins of the newly modified style, or Reverse of 2008, are encapsulated without designation. "This is a significant hub variety," comments Rick Montgomery, NGC President. "It has very clear diagnostics, and appears on one of the most widely collected of all US coins. We're also very proud to be the first to present this information to the numismatic community and to attribute the variety as part of the NGC certification process."

NGC will automatically assign the designation REVERSE OF 2007 when applicable during the course of grading, and there is no additional fee for this service. Reverse of 2007 coins graded before the discovery can be submitted for Designation Review service (\$10 per coin) to have the variety recognized on the certification label. This variety can also be assigned with Early Releases designation to 2008-W Silver Eagles received by NGC or approved depository by Thursday, April 24, 2008. Redesignated coins already bearing the Early Releases designation will retain the Early Releases designation.

At present, it is not known whether bullion issue 2008 Uncirculated Silver Eagles, without W mintmark, can also be found with both reverse types. The relative rarity of Reverse of 2007 coins versus Reverse of 2008 coins has also not yet been established. NGC will report the newly discovered variety in the NGC Census.

APRIL 21, 2008 UPDATE: According to the May 5 issue of Coin World, Leesburg, Ga., collector John Nanney notified them of the Uncirculated 2008-W American Eagle, Reverse of 2007 silver dollars by on April 15. This is the first reported discovery. For comprehensive reporting, see Coin World.

Washington Error Coins.com

Welcome to Washington Error Coins!

This website is dedicated to the 2007 Washington Dollar Coins released with missing edge lettering errors.

In 2007 the U.S. Mint began producing the first coin in the new Presidential Dollars series and a small number of coins were accidentally released without the usual lettering on the edge. This is a very RARE ERROR that quickly became known as the "Godless" coin because "In God We Trust" was part of the missing inscription on the edge of these coins.

Visit our website to read more about these rare "Godless" coins...

We were fortunate to secure a very limited number of Washington Error Coins. Remember there are not many of these phenomenal error coins available. This is a rare chance to own the most talked-about error coin in generations. But please don't wait -- YOU MUST ORDER NOW! Quantities are limited and prices will go up!

CONECA

The Combined Organizations of Numismatic Error Collectors of America

CONECA is a national numismatic organization devoted to the education of error and variety coin collectors. CONECA focuses on many error and variety specialties, including doubled dies, Repunched mintmarks, multiple errors, clips, double strikes, off-metals and off-centers -- just to name a few. It publishes an educational magazine, The Errorscope, which is printed and mailed to members bimonthly. CONECA offers a lending library, examination, listing and attribution services; it holds annual meetings at major conventions (referred to as Errorama) around the country, and offers auction services to its members. Please visit conecaonline.org and enjoy!

CONECA Variety Attribution Services

CONECA offers two attribution services. One service enables members and non-members to send their coins directly to an authorized CONECA attributer. The other service is offered through the numismatic grading firm of ICG and enables CONECA members and non-members to have their coins attributed by a CONECA attributer and then graded and slabbed by ICG.

CONECA Error Examination Services

CONECA offers two examination services. One service enables members and non-members to send coins to an authorized CONECA examiner who will return an opinion of each coin's error classification. The other service is offered through the numismatic grading firm of ICG and enables CONECA members and non-members to have their coins examined by a CONECA examiner and then graded and slabbed by ICG.

Mint Error News Price Guide

- Entire Price Guide Updated 5/1/08 -

This price guide is brought to you by Mint Error News. It has been compiled by many of the top major mint error dealers.

This price guide is a guide. Prices fluctuate due to the date, grade, eye appeal and how dramatic the striking error is. Rarity is also a factor. The price is sometimes based on the rarity and grade of the type of coin as well as how rare the error is. The price can also vary depending on whether two collectors are bidding for the same rare major mint error. When purchasing a mint error, it is important to use multiple resources to determine value, as there are many mint errors that do not fit into one category.

Proof Errors

Proof coins are struck by technicians who hand feed the blanks into special presses. They are produced, examined, and packaged using extreme quality control. It is very unusual to find major proof errors. A few broadstrikes, off-centers, double strikes in collars and off-metals have been known to be found in sealed proof sets. Proof errors are aggressively sought after by many error collectors.

A very small group of Proof errors recently came from a collection that was auctioned by the State of California. The U.S. Secret Service inspected and released this collection to the State of California determining that it was legal to own. The State of California then auctioned the collection and it has been dispersed since the sale.

Broadstrikes

A broadstruck error occurs when a coin is struck without the collar to form the rim and edge that is part of the shape of the coin. Coins can be broadstruck on either type one or type two planchets. When a coin is broadstruck the blank being fed into the collar will spread and distort outward as it is being struck because the collar isn't in the correct position to retain it.

Partial Collars

Partial collar strikes occur when there is a malfunction of the striking press. This causes the collar to be in an incorrect position. The lower die (usually the reverse die) is recessed in the collar. This allows the coin which is going to be struck to have a formed rim. After a coin is struck the lower die raises upwards, pushing the struck coin out of the collar and ejecting it. If a blank entering the collar is not properly seated, it will only have partial reeding as it is struck. The edge of this coin will have a partial reeding and a partial blank surface area. Recently, the Mint has installed new machinery where either die can be installed in either position.

Uniface Strikes

Uniface coins occur when there have been two blank planchets in the press at the same time. The other blank will obstruct the die on either the obverse or reverse side, which will prevent it from having that design on the coin. There are many different variations involving uniface errors. In addition to having a 100% blank obverse or reverse, a coin can be struck off-center, with a blank planchet in the collar which will obstruct one side of the off-center. There are also mated pairs which have a combination of multiple errors which can include a side which is uniface. Finally, there are uniface strikes due to a die cap which adhered to the die, forming itself in the shape of a die and striking blank planchets.

Bonded Coins

Bonded coins occur when the feeder system, which supplies blank planchets to the coin press, malfunctions and jams. When this occurs, a struck coin is not properly ejected and another planchet is fed into the collar and is struck. This struck coin will land on top of the previously unejected strike. These coins will then crush and bond together. This may occur many times as more coins bond.

Coins Struck on Feeder Finger Tips

After a recent tour of the U.S. Mint in Philadelphia, it was discovered that the minting process had changed to some degree. One of the changes was that “feeder fingers” were used during the striking of all denominations of U.S. coins. Prior to this tour, U.S. coins that were struck on feeder finger tips were authenticated and described as being struck on aluminum scrap. Coins from all modern denominations have been discovered that were struck on the tips of these feeder fingers.

Struck Fragments

The blanking press takes the coils of metal strips and punches blanks out of it, ejecting the webbing at the other end. The webbing is cut into small scrap pieces to be melted and recycled. Occasionally a scrap piece will be mixed with the blank planchets and struck by the dies. Struck fragments are rare in the larger denominations. These can be uniface or die struck both sides and are very rare on type coins.

Mated Pairs

Mated pairs involve two individual coins with different errors that were struck together at the same time. Mated pair error combinations can be found in most error types and come in many shapes and sizes. Mated pairs can be overlapped when one of the coins is struck off-center on top of another coin. Another type involves a brockage where a struck coin was perfectly centered on a blank and restruck. Some mated pairs involve a die cap where the cap and brockage coin are discovered together, but this is a scarce find.

The rarest mated pair type involves two die caps (obverse and reverse) where both dies were capped at the same time and both die caps are mated. This last type is extremely rare and there are only a few known examples of mated pairs involving an obverse die cap and reverse die cap. There are several of these mated pairs known on Kennedy Halves including two dated 1976, which is the Bicentennial year. One of the most spectacular mated pairs involve two Barber Dimes, an obverse die cap mated to a reverse die cap and are unique.

Mated pairs can also involve an off-metal where a smaller blank planchet or smaller struck coin was struck on top of a larger coin. This type is extremely rare. The most spectacular pair known is a double struck Franklin Half which was mated to a Lincoln Cent. The Lincoln Cent blank was on top of the obverse of the struck Franklin Half. This pair was then struck together. It is unique.

Transitional Errors

A transitional error occurs when a coin is struck on a planchet from a previous year with different metal composition. The most famous transitional is a 1943 copper cent struck on a 1942 copper blank. 1943 cents were struck in steel because of the copper shortage during World War II. Other famous transitionals include 1965 coinage struck in silver instead of clad.

There are also transitionals struck on blanks for the next year. An example is 1964 coinage in clad instead of silver. Most recently, transitionals were discovered involving the SBA and Sacagawea Dollars of 1999 and 2000. There are eight known 1999 SBA Dollars struck on the brass planchet for the 2000 Sacagawea Dollar, and four known 2000 Sacagawea Dollars struck on a clad planchet for the 1999 SBA Dollar.

U.S. Gold Errors

Major mint errors on U.S. Gold coins are the most prized category of all mint errors. Gold errors are very rare and a few have traded in the \$75,000 to \$100,000 range. Even a broadstruck U.S. Gold coin can easily sell for \$15,000 to \$30,000 compared to a broadstruck Cent, Nickel, Dime or Quarter which all sell for well under \$10. Many serious collectors of Gold Errors have to wait patiently for months and sometimes even years to acquire that one special piece for their collection.

The prices listed here are for common dates in AU-Unc. Better dates and errors that are in gem condition are worth considerably more.

Indents

An indent error occurs when two blanks are fed inadvertently into the same collar, with one blank partly overlaying on top of the other. When the hammer die strikes this combination, the upper blank will be forced into the lower blank, creating a depression which is shaped similar to the upper blank. A scarce type of indent occurs when a blank intended for one denomination lands on top of a blank from a different denomination.

Die Caps

Die caps are caused when a struck coin sticks to the upper hammer die. Once the coin is struck to the die face, the reverse of the struck coin becomes the new die face. When the next blank is fed into the collar and the strike occurs, the reverse design of the adhered struck coin impresses itself into the new blank. This struck coin is a brockage strike. The coin that adhered to the upper die is known as a die cap. This process repeats itself as more coins are struck by the cap. The greater the number of strikes, the higher the cap metal will be pushed around the upper die shaft. Eventually, the cap brakes away from the die in the shape of a thimble.

Die Adjustment Strikes

Die adjustment strikes are also known as die trials. This error occurs when a coin is struck from the press with very little pressure. When the press is being set up and adjusted, extremely weak strikes occur as the strike pressure reaches its optimum level. These die trials are destroyed after being struck and are rarely found in circulation.

Double Denominations

One of the most expensive, popular, and desired types of errors are the double denominations. This error happens when a coin is struck on a previously struck coin of a smaller denomination. Examples are a cent on a struck dime, and a nickel on a struck cent. The most dramatic are those with considerable design visible from the original strike. There are a few known double denominations with different dates.

Brockages

A brockage error can only occur when there are two coins involved. One of the coins involved will always be a struck coin which has not ejected properly. That struck coin will find its way back between the dies and will be struck next to a blank planchet which was fed into the collar. The image of that first struck coin will be impressed into that side of the blank planchet. The result will be a second coin which has images of the first coin impressed into it. Those images will be pressed into the coin and the image will be in reverse. This incuse sunken image is known as a brockage.

Double & Multiple Strikes

When a blank planchet is struck by the dies, the normal procedure is for the feeders to eject the struck coin out of the collar and into a chute. If there is a malfunction and the struck coin isn't ejected, it may receive a second or third strike by the dies. A multiple struck coin can happen in many ways and have many combinations of errors.

(Since each double and multiple strike can vary from being 10% off-center to 90% off-center, the prices listed below can be substantially more based on the percent off-center and dramatic overall look.)

Off-Center Strikes

Off-center coins are one of the most common and best known types of errors. This happens when a blank which is supposed to be fed into the press, lands in the collar improperly. When this occurs only part of the blank is between the upper and lower dies. When the dies strike the blank, only that part will be struck with a design.

Off-Metals

Off-metal and wrong planchet errors occur when a correctly made blank from one denomination is accidentally fed into a press for another denomination. Examples are a nickel struck on a cent planchet and a cent struck on a dime planchet. The coin struck on an incorrect blank will weigh exactly what the denomination of that blank would have been. An even more dramatic wrong planchet error is a coin struck on a previously struck coin of a different metal.

Counterbrockages

A counterbrockage error involves a cap die and a previously struck coin. When a cap die strikes a previously struck coin, the obverse design from that struck coin will be impressed into the cap. The result will be a design where the cap face will be an incuse brockage. When a new blank is struck by this cap die with an incuse brockage image, the obverse will have a raised and spread image from that incuse design of the cap. This brockage impression is known as a counterbrockage.

Fold-Over Strikes

A fold-over coin is one of the most dramatic types of errors. It occurs when the blank is standing vertically between the dies. During the strike, the force is so great that it bends and folds the blank. These fold-overs can be on-center or off-center, and come in many different shapes. There are a few fold-overs with multiple errors, either with an additional strike or fold-over. Denominations above quarters are very scarce.

Martha Washington Test Pieces

There is one set of a Dime, Quarter and Half struck by Martha Washington dies that are permanently housed in the Smithsonian Institute, embedded in blocks of lucite. According to United States Pattern and Related Issues, by Andrew W. Pollock III, “the only trial pieces purported to have survived metallurgical testing in 1965 were the Dime, Quarter Dollar, and Half Dollar equivalent strikes in copper-nickel clad over copper.”

Mike Byers’ discovery of the Martha Washington Test Piece on a copper-zinc Cent planchet struck 10% off-center with a uniface reverse was a front page Coin World article on August 7th, 2000.

Missing Edge Lettering

A mint error has recently been discovered on the new Presidential Dollars. These coins inadvertently left the United States Mint without edge-lettering on them. The inscriptions 'In God We Trust,' 'E Pluribus Unum,' as well as the mint mark and year are absent from these errors.

The Jefferson Dollar Missing Edge Lettering discovery coin sold on eBay for \$4,050.00 and was certified MS 65 by PCGS.

It recently re-sold on eBay for \$4,500.

1982 Mint Error Catalog

Editor's Note: Here is another in a series of Mint Error Catalogs from Fred Weinberg when he was with Numismatics, Ltd. It is always exciting to compare current mint error prices with those from decades ago. Mint Error News Magazine thanks Fred Weinberg (fredweinberg.com) for sharing these with our readers.

The cover of the catalog features a pink background with a white horizontal band. At the top left is the 'NL' logo. To its right, the text reads 'Numismatics, Ltd.' and 'Spring 1982 Mint Error Catalog No. 12'. Below this, it says 'FEATURING COIN AND CURRENCY ERRORS'. The central image is a black-bordered rectangle containing eight US coins with various mint errors, including a large quarter, a dime, a nickel, and a penny. At the bottom right of the cover, the price '\$5.' is displayed. The contact information for Numismatics, Ltd. is provided at the bottom center, along with phone and telex numbers. CoinLink operates on one simple principle...

To provide the numismatic community with access to the “best” numismatic information, news and resources on-line.

CoinLink® was started in 1995 by Anteater Design Group Inc., and is headquartered in Longwood, Florida (just northeast of Orlando).

For over 12 years we have been proud to operate the most popular and comprehensive numismatic directory on the web, referring collectors to thousands of numismatic sites, and providing unbiased access to resources that are informative and relevant to collectors and dealers alike.

The reason for our success has been a willingness to listen to our users suggestions and provide innovative solutions to aggregating the diverse and ever changing sources of numismatic information available.

CoinLink does not buy or sell coins. We have NO commercial or financial interest in any company that does. We do NOT compete against our advertisers.

Rather, our goal is to provide a platform from which dealers and collectors can find each other and stay informed about what is happening within the marketplace and within the hobby.

As we move into our 12th year of operations, we want to thank all of the users, supporters and sponsors who have made CoinLink what it is today, and who continue to shape the direction in which CoinLink will grow in the future.

\$1,750

\$1,750

This came out of an estate along with a few other dramatic Silver Kennedy Half Errors.

\$2,750

BUYING MAJOR ERROR COINS & CURRENCY

If you have a single major mint error coin, either a recent issue or an older type coin, or 1,000 Off-Center Cents, please contact us. We stock over 60,000 Major Mint Error Coins and constantly need to purchase Major Error Coins for our clientele (please note that we do not deal in or buy Die Varieties, Damaged Coins, Doubled Dies, Filled Dies, or Die Cracks).

We do buy Major Mint Errors - such as Off-Center, Off-Metals, Double Strikes, Clad Layers missing, Die Caps, Double Denomination, etc.

Because of the many differences in each Error Coin we request that you send scans of your coin(s) to us for our examination and firm offer.
